Test Procedures

You can skip the whole testing section if you want to just try things out on your own. Make sure to check the other sections.

General

Layout

In general, the layout and design of the whole app should fit your screen, and size properly. This does not include aesthetics just functionality and responsiveness. All pages should be accessible. The pages in this app include.

1. Sign Up
2. Sign In
3. Store
4. Cart
5. Library

Themes

You should have access to the light and dark theme of the App by changing your System's theme.

Buttons and Labels

All buttons should work as the label says.

Sign Up

1. Try the "Already have an account button". This should take you to the sign in screen. You can press the "Don't have an account button" to go back to testing the Sign Up Screen.
2. Try to enter an empty email and tap signup, you should get a popup that your email is invalid
3. Try to enter an invalid email and tap signup, you should get a popup that your email is invalid. Valid Emails contain alphanumeric symbols and a single @ however the email cannot start or end with @.

4. Try to enter a valid email and no password and tap signup. You should be prompted to enter a password.
5. Try to enter a password with no repeat password, a prompt should pop up saying the Password and Repeat password must match.
6. Try to enter a matching password and repeat password. Try to violate all the requirements for a password before signing up. The Requirements should change to a red color if you violate it, if you didn't violate the requirement, the requirement should disappear. Here is a sample
 - a. A – only satisfies 1 uppercase letter
 - b. a – only satisfies 1 lowercase letter
 - c. 1 – only satisfies 1 digit
 - d. ! – only satisfies 1 special character
 - e. 12345678 – satisfies both 8 characters and at least 1 digit
 - f. Ab – satisfies at least 1 uppercase and lowercase letter
 - g. Ab1 - satisfies at least 1 uppercase, lowercase letter
 - h. Ab1! – satisfies, 1 uppercase, lowercase, digit, special character
 - i. Abc123!x - Satisfies all conditions
7. Once you Sign Up with a correct password, you should be sent to the Store Page. Click The Log out button at the top and Click the “Don't have an account” button in the Sign In page to continue testing the Sign Up page.
8. Now in the Sign Up page try to register a new account but use the same email as the account you made before. Make sure to fill in the password fields (They don't have to match or be the same as the original password for this test). You should get a prompt saying that the account already exists when you try to use the same username.

That's the end of the test for the Sign-Up Page :)

Sign In

Assuming you continue from where you stopped in the Sign Up section. These are the steps you can follow.

1. Try to press the Sign In Button without an email or password. You should get a prompt telling you to enter an email.
2. Try to enter an email without a password and press sign in. You should get a prompt telling you to enter a password
3. Try to enter an email that you haven't registered and enter a random password and press sign in. You should get a prompt that the user does not exist.

4. Try to enter the email you registered but type a password different from what you registered with. You should get a prompt that the password is incorrect.
5. You can now enter the correct password. You should be sent to the Store page.

Thats the end of the test for the Sign-In Page :)

Store

Assuming you continue from where you stopped in the Sign In section. These are the steps you can follow.

1. Try to scroll list of Books in the store. (If they even load)
2. Try to add one of them to cart by tapping “Add to Cart”, do this without entering an amount value. You should get a prompt saying that no amount was given.
3. Do the previous step but give an amount value of your choice. You can add multiple items.
4. Click the Cart button at the top to see all the items that have been added. Click the store button to go back to the store.
5. Try to add more items to your cart and check the cart again to see if they were added.

Thats the end of the test for the Store Page :)

Cart

We’ve been testing the cart by adding products to it in the previous steps. There are still a few things to test though.

1. Try to empty the cart by pressing the “Empty Cart” button. The cart should now say “is empty”. Click the Store button and add more items to the cart to refill it.
2. After Adding more items, check if the totals are correct, both in the total column and the final total. The values should all match up.
3. Click the “Checkout” button to “purchase” the items. The cart should be empty after this.
4. Try to press the back button on your phone. This should take you back to the store.

Thats the end of the test for the Store Page :)

Library

We have bought some Books. Let’s check them out.

1. Click the Library Button at the top to go to the library page. This should be accessible from both the Store and Cart pages.
2. You should see the products you bought here and the quantity of each one.
3. Try to buy more products and see if the quantities get updated here.
4. If you want to see how an empty Library looks, make a new account and check the library before buying stuff. The library should say “is empty” like how the Cart does when its empty.

Other

If Everything works as intended, then try to break the app :) Do stuff that no normal person would do in the app. If you find anything write it down.

Feedback/Bug Reports

Bug Report

Bug Reports should include the following.

1. What happened before the bug occurred
2. What did you expect to happen
3. What happened

Feature Request

Features will probably not be added but if it's simple enough it could be added. Feature request should include.

1. What the feature is
2. Why the feature would be good

Feedback

You can give feedback on what you liked or what you didn't like about the app.
